ABOUT ME

Backend and data engineer with approximately seven years building government data platforms in Indonesia, progressing from application development to system architecture at national scale. I design microservice-based REST API ecosystems that let government agencies securely exchange, publish, and consume structured data under the SPBE and Satu Data Indonesia interoperability standards. My focus spans Go and Python backends, database-level security, real-time ingestion, and auth/encryption for on-premise, regulated environments — paired with hands-on technical leadership, mentoring, and cross-agency collaboration across provincial and national stakeholders.

WORK EXPERIENCE

IDEAS Data Ecosystem (PT Indonesian Data Ecosystem) · Jakarta, Indonesia (Hybrid)

Jan 2026 – Present

System Architect

- Architect DataHub, a national government data platform built as microservices — designing the REST API contracts, LDAP/Active Directory authentication, and database-level encryption that integrating agencies build against.
- Built real-time data ingestion across multiple agency and partner sources, reconciling differing data schemas into a single unified contract.
- Lead a small Go and Python engineering team, reviewing architecture and performance on pull requests.
- Mentor engineers from junior to senior level through code review, architectural guidance, and pairing.

Stack: Go, Python, REST APIs, LDAP/Active Directory, Docker, on-premise infrastructure.

Jabar Digital Service · Diskominfo Jawa Barat · Bandung, Indonesia

Jun 2022 – Dec 2025

Backend Engineer

- Built and operated backend systems for West Java's core government data products under SPBE — Satu Data Jabar, Open Data Jabar, the APBD Executive Dashboard, and a district/city data portal — within a provincial digital-services team that grew to around 200 people.
- Designed REST APIs that let regional agencies publish and consume each other's datasets on one shared interoperability contract.
- Implemented per-endpoint access control with token authentication and encryption to harden the data-exchange layer.
- Operated the data layer across PostgreSQL and MongoDB with MeiliSearch, Redis, and S3.

Stack: Python, FastAPI, Flask, PostgreSQL, MongoDB, Redis, MeiliSearch, Docker.

PT Reka Cipta Solusi · Bandung, Indonesia

Jun 2021 – Jun 2022

Backend Developer (concurrent — contract)

- Built and maintained payment-gateway backends in Java, mostly on an in-house framework with Spring Boot where it fit.
- Wrote the integrations between client systems and the payment gateway.
- Performed security testing on the transaction path before every release.

Stack: Java, Spring Boot, MySQL.

Ran concurrently with the Trikintech contract and the Coding Bee teaching role.

PT Trikintech Inteligensi Bisnis · Kabupaten Bandung, Indonesia

Oct 2018 – Jun 2021

Backend Developer (concurrent — contract)

- Built on-premise government web applications for structured and unstructured data collection with internal authentication, for air-gapped environments.
- Built a real-time validation engine that rejected bad records at ingest.
- Introduced a message broker in front of the ingest pipeline so traffic spikes could not drop data.

Stack: Backend services, message broker, on-premise RDBMS.

Ran concurrently with the JAPINDO role (Oct 2018 – Jan 2020) and later the Coding Bee role.

Senior Educator (concurrent — part-time)

- Taught backend, frontend, and game development — JavaScript, Python, Node.js, C#, and MySQL — across multiple student cohorts.

Ran concurrently with the Trikintech and Reka Cipta contracts.

PT JAPINDO · Karawang, Indonesia

Oct 2018 – Jan 2020

Full-Stack Developer

- Built and maintained full-stack web applications end to end with Laravel and PHP, with Bootstrap/HTML front-ends.

Stack: Laravel, PHP, Bootstrap, HTML.

EDUCATION AND TRAINING**Bachelor of Science in Computer Science** — Universitas Langlangbuana, Bandung, Indonesia

2014 – 2018

Indonesian qualification: S1 Ilmu Komputer (S.Kom.). Broadly equivalent to a European Bachelor's degree (EQF Level 6); an ENIC-NARIC credential evaluation can be added for EU/UK/Nordic applications if required.

SKILLS

Backend: Go (chi, Echo), Python (FastAPI, Flask, Django), Java (Spring Boot), PHP (Laravel), Node.js/Express, SQL; C#

Data engineering & databases: Airflow, dbt, PySpark; PostgreSQL, MySQL, Trino (column/row-level security, masking); MongoDB, Redis, MeiliSearch; S3-compatible storage

APIs & integration: REST API design & versioning, microservices, message queues, inter-agency interoperability (SPBE / Satu Data Indonesia)

Infrastructure & DevOps: Docker, CI/CD (GitHub Actions), Nginx, Ubuntu, on-premise regulated environments

Security: LDAP/Active Directory, token authentication, RBAC, database-level encryption, API security testing

Soft skills: technical leadership and architecture ownership, engineering mentorship, cross-agency stakeholder collaboration, architecture and code review

LANGUAGE SKILLS

Language	Listening	Reading	Spoken interaction	Spoken production	Writing
Indonesian	C2 — Native	C2 — Native	C2 — Native	C2 — Native	C2 — Native
English	B2	B2	B2	B2	B2

English: B2 (professional working proficiency), self-assessed using the CEFR can-do descriptors; no formal certificate held.

PROJECTS

Government data platforms: DataHub (national, microservices · Go/Python/LDAP); Satu Data Jabar & Open Data Jabar (FastAPI/PostgreSQL/MeiliSearch); APBD Executive Dashboard; One-Map Geospatial Platform (PostGIS); City & District Data Portals; Regional Open-Data Portals; Cirebon Open-Data Portal (Next.js).

Data infrastructure: Data Sync Pipeline (Airflow); Column & Row-Level Security (Trino masking); Master Data Service (Go read API).

Services & earlier work: Pesona Hub Digi (FastAPI + Nuxt/Vue); Email Scheduling Service (Celery); Reporting Telegram Bot; Modular ERP (FastAPI + React, runtime plugin loader); Sapta Job Portal (React/Express); SIPS Forestry System (web + analytics).

Certifications: none currently held.
