

Faisal Nugraha Cayunda

Software Engineer · Backend & Data Engineering

+62 821-1683-7950 | faisal.nugraha.c@gmail.com | linkedin.com/in/faisal-nugraha-cayunda-7b459324b | Bandung, Indonesia

Backend and data engineer with seven years building government data platforms at provincial and national scale, now leading backend architecture at a national data ecosystem company. I work mainly in Go and Python: the REST APIs that let separate agencies exchange data, plus the services behind open-data portals, executive dashboards, and payment gateways. Most of it runs on-premise under SPBE and Satu Data Indonesia rules, so I have spent a lot of time on LDAP/Active Directory integration, database-level encryption, and per-endpoint authorization.

WORK EXPERIENCE

IDEAS Data Ecosystem · Jakarta (Hybrid)

Jan 2026 - Present

System Architect

- Own the architecture for DataHub, a national government data platform built as microservices; designed the REST APIs, the LDAP/Active Directory auth, and the database-level encryption that integrating agencies build against.
- Built the real-time ingestion across several agency and partner sources, reconciling the same data arriving in different shapes into one contract.
- Lead a small Go and Python team, review architecture and performance on PRs, and mentor engineers from junior up to senior.

Jabar Digital Service / Diskominfo Jawa Barat · Bandung

Jun 2022 - Dec 2025

Backend Engineer

- Built and ran the backends for West Java's main government data products under SPBE: Satu Data Jabar, Open Data Jabar, the APBD Executive Dashboard, and the district/city data portal.
- Designed the REST APIs that let regional agencies publish and consume each other's datasets on one shared contract, standardizing schemas across agencies.
- Added per-endpoint access control with token auth and encryption; ran the data layer on PostgreSQL and MongoDB with MeiliSearch, Redis, and S3.

PT Reka Cipta Solusi · Bandung

Jun 2021 - Jun 2022

Backend Developer (Contract)

- Built and maintained payment-gateway backends in Java, mostly on an in-house framework with Spring Boot where it fit.
- Wrote the integrations between client systems and the gateway, with security testing on the transaction path before every release.

PT Trikintech Inteligensi Bisnis · Kabupaten Bandung

Oct 2018 - Jun 2021

Backend Developer (Contract)

- Built on-premise government web apps for collecting structured and unstructured data, with internal auth since the systems ran air-gapped.
- Wrote a real-time validation engine that rejected bad records at ingest, with a message broker in front so a traffic spike couldn't drop data.

Coding Bee Academy · Bandung

Feb 2020 - Jun 2022

Senior Educator (part-time, concurrent with contract work)

- Taught backend, frontend, and game development (JavaScript, Python, Node.js, C#, MySQL), which kept my fundamentals sharp and made me better at explaining systems.

Full-stack Developer

- Built and maintained web applications end to end with Laravel, PHP, Bootstrap, and HTML.

The contract and teaching engagements from 2018 to 2022 ran concurrently with full-time roles.

EDUCATION

Bachelor's Degree (S1), Computer Science — Universitas Langlangbuana

Bandung, Indonesia

SKILLS

Languages: Go, Python, Java, PHP, JavaScript/TypeScript, SQL

APIs & frameworks: chi, Echo (Go); FastAPI, Flask, Django (Python); Spring (Java); Laravel (PHP); Node.js/Express; REST, microservices, message queues

Databases & data: PostgreSQL, MySQL, MongoDB, Redis, Trino, MeiliSearch; Airflow, dbt, PySpark; ETL/ELT, data warehousing

DevOps & infrastructure: Docker, Kubernetes, GitHub Actions, CI/CD, Terraform, Nginx, Ubuntu, S3, on-premise deployment

Security & standards: LDAP/Active Directory, token auth, RBAC, database-level encryption; SPBE, Satu Data Indonesia

Soft skills: communication, teamwork, analytical thinking, mentoring, clear technical writing

PROJECTS

- **DataHub** — national data platform as microservices; REST APIs, LDAP auth, and encryption other agencies build on. Go, Python.
- **Master Data Service** — master-data read API rewritten Rust→Go; clean read/write split, hardened auth. Go, chi, PostgreSQL.
- **One-Map Geospatial Platform** — PostGIS mapset API with on-the-fly choropleths and classification-based access. Python, FastAPI, PostGIS.
- **Column & Row-Level Security** — per-consumer column/row access with type-correct masking. Trino, SQL.
- **City & District Data Portal** — district/city open-data backend; search, caching, object storage. Python, FastAPI, Redis, S3.
- **Pesona Hub Digi** — feature-sliced FastAPI data-hub monolith with a Nuxt/Vue front end. FastAPI, SQLAlchemy, MySQL, MinIO.
- **Satu Data Jabar / Open Data Jabar** — two public open-data platforms on one interoperability contract. Python, Flask, MeiliSearch.
- **Cirebon Open-Data Portal** — public portal front end with interactive data visualizations. Next.js, React, TypeScript.
- **Regional Open-Data Portals** — one modular backend reused across regions; a new region is mostly config. Python, FastAPI, MinIO.
- **Data Sync Pipeline** — Airflow pipeline syncing master records; idempotent runs, staged loads. Airflow, Python, PostgreSQL.
- **Executive Dashboard** — live read on regional budget, tax, and the metrics decision-makers ask for. Python, Flask, PostgreSQL.
- **Modular ERP** — ERP whose feature modules load at runtime, no redeploy. FastAPI, React.
- **Reporting Telegram Bot** — Google Sheets into on-demand reports in Telegram; async, retries. Python, SQLite, httpx.
- **Email Scheduling Service** — background job service that queues and sends scheduled emails. Flask, Celery, Redis.
- **Sapta Job Portal** — internal LinkedIn-style job board. React, Express.js.
- **SIPS Forestry System** — consolidates forestry data with analytics for sustainable management. Web, analytics.
